

# The Title

Nicholas Tocci

Dr. Gregory Kapfhammer

## Introduction

Size and complexity of modern Python programs:

- lack of types

Possible misleading nature of statement coverage:

- only what was executed
- doesn't factor in branches and iteration
- no information on data state
- quality of the oracle

## A Diagram

Here is a diagram:

## Fundamental Theorem of Calculus

If  $f$  is continuous on the closed interval  $[a, b]$  and  $F$  is the indefinite integral of  $f$  on  $[a, b]$ , then

$$\int_a^b f(x) dx = F(b) - F(a). \quad (1)$$

## Conclusion

This is a great poster format!
